Case Study

Cyber Incident Response Exercise

Most companies operating within the defence sector will require enhanced levels of cyber security if they work with the Ministry of Defence. This often requires evidence that the UK's Cyber Essential and Cyber Essential Plus certifications have been achieved.

CSA works with several defence companies to maintain the high levels of cyber security required. The CSA training services were used to provide evidence that the defence company is demonstrating and validating its cyber security practices. The exercise uses a number of tailored and realistic cyber scenarios to test how the company reacts to a cyber incident. It is vital that the company is tested on its incident response policies and processes, including running through its Business Continuity Plan.

Once conducted, CSA provided a number of written recommendations and improvements that not only ratified the current plan but provided the evidence required to demonstrate that the company took its cyber security seriously. Upon receiving the recommendations to further enhance its cyber security, the defence company enrolled all its staff on the CSA e-Learning courses and worked with CSA to ensure 100% of employees completed the training within 2 weeks.
