Incident Response Tabletop Exercises

With the cyber threat landscape rapidly evolving, organisations must be prepared to detect, respond, and recover from security incidents swiftly and effectively.

Our incident scenarios are meticulously designed in tandem with your organisation to ensure a realistic, feasible attack path is identified with effective injects designed to reflect your organisations environment, structure, tech stack and processes.

By simulating cyber attacks, insider threats, and operational disruptions, we help your team identify gaps, refine response strategies, and build confidence in handling real-world incidents.

Our approach includes:

- Designing and building bespoke cyber security incident scenarios created to test weaknesses in your people, processes and technology.

- A facilitated technical session with technical stakeholders designed to test ability to identify, investigate, contain and escalate.

- A senior leadership tabletop designed to test management of communications, PR, legal/ regulatory reporting and more.

- Post-exercise debrief and executive summary to centrally collate and discuss all findings.

- Actionable recommendations and roadmap to support your business moving forwards.

BENEFITS

Improve preparedness
Validate incident response plans, escalation procedures, and decision-making workflows.

Enhance team coordination
Strengthen collaboration between IT, security, legal, PR, and executive stakeholders.

Identify gaps
Discover weaknesses in detection, containment, communication, and recovery processes.

Meet regulatory requirements
Support compliance with NIST, ISO 27001, PCI DSS, and other frameworks.

Knowledge and expertise
Ensure leadership is ready to make critical decisions under pressure.
